+ RELOCATION, CLEARANCE AND DISPLAY WORK

MOVE THE WORKPLACE. CLEAR SELECTED AREAS. CONNECT THE PHASES.

ASI connected internal furniture relocation and selective clearance with display installation and whiteboard work at Thomson Reuters' McLean workplace.

OVERVIEW

CHALLENGE

Furniture and office contents needed designated receiving areas across several floors within one building, alongside selective clearance and separate display and whiteboard work.

ASI APPROACH

ASI coordinated furniture handling, selective decommissioning, waste and crate requirements with later display installation and whiteboard relocation/remounting. Each responsibility remained within its defined field scope.

RESULTS

- Selective furniture clearance
- Displays physically mounted
- Whiteboard relocation/remounting

THOMSON REUTERS | MCLEAN

The McLean engagement linked workplace assets, clearance and installation through one accountable coordination path. Existing-room and field-stage views show furniture handling, selective clearance and physical display installation within that transition.

+ THE INTERIOR SCOPE

ONE WORKPLACE TRANSITION.
DISTINCT FIELD RESPONSIBILITIES.

Internal relocation, selective furniture clearance and later installation work shared the same building. Existing-room context shows the assets and spatial relationships that shaped the field assignment.

DESIGNATED ASSETS

CLEAR
SELECTED AREAS

INSTALL
DISPLAYS AND BOARDS

Furniture and contents

The relocation scope connected furniture and office contents with designated destinations within the building. Selective furniture decommissioning, waste handling and broom cleaning addressed the assigned origin areas.

Physical installation

Display installation and whiteboard relocation/remounting formed a later workstream. The mounted-display views retain the surrounding room, move crates and visible field-stage conditions.

+ FIELD EXECUTION

SELECTIVE ROOM CLEARANCE.
PHYSICAL DISPLAY INSTALLATION.

The cleared conference-room footprint retains the building's existing finishes and interfaces. The display view shows physical mounting with move crates and handling equipment still present.
