+ A COORDINATED MOVE AND OFFICE EXIT

MOVE WHAT STAYS. CLEAR WHAT GOES. CONNECT THE WORK.

ASI coordinated contents relocation, office dismantling, trade disconnections and material recovery across Stantec's Royal Drive exit and receiving-location move.

STEEL RECOVERY RECORDED

ONE PLAN
CREWS AND TRADE INTERFACES

OVERVIEW

CHALLENGE

Stantec's transition required more than hauling furniture. Office contents had to move between locations while demountable walls, cubicles and residual materials were removed from the departing suite.

ASI APPROACH

ASI connected moving crews, onsite dismantling, trade disconnections and recycling resources. The field plan distinguished materials moving onward from items designated for removal.

RESULTS

- Royal Drive workplace areas cleared
- Contents transferred between workplaces
- 30,114 pounds of steel recovery documented

STANTEC | ALPHARETTA

The assignment joined a workplace move with the physical work of leaving the former office. ASI coordinated the people and trade interfaces behind the clearance, with separate handling for relocated contents, dismantled furniture and recovered material.

+ EARLY WORKPLACE LAYOUT AND REMOVAL RELATIONSHIPS

READ THE WORKPLACE.
ORGANIZE THE EXIT.

The early Royal Drive layout shows open workstations, enclosed offices and shared circulation. Those relationships help explain the sequence of dismantling, contents movement and removal across the departing suite.

+ THE ASI DELIVERY MODEL

DIFFERENT CREWS.
CONNECTED RESPONSIBILITIES.

ASI brought the moving, dismantling and trade interfaces into one coordinated assignment. The work distinguished contents to be relocated, components to be removed and infrastructure intentionally retained.

MOVE

RELOCATE DESIGNATED CONTENTS

Coordinate the Royal Drive to Westside move, including contents handling and additional movement between floors at the receiving location.

CLEAR

DISMANTLE THE DEPARTING WORKPLACE

Remove designated demountable walls, desks, cubicles, interior signage and hanging items, then clear residual materials from the suite.

CONNECT

MANAGE TRADE INTERFACES

Coordinate electrical disconnection and appliance waterline work with the moving sequence. Limited low-voltage cabling was pulled from furniture and coiled at the walls.

RECOVER

SEPARATE AND REMOVE MATERIALS

Organize loading and recycling resources for dismantled workplace components, with recorded metal recovery tied to the clearance.

CLOSE

DOCUMENT THE FIELD WORK

Capture delivered moving and clearance services in signed field records, with photographs showing the cleared workplace areas.

ONE ASSIGNMENT CONNECTED THE FIELD WORK

Moving crews, dismantling labor, trade disconnections and recycling resources were coordinated across the transition. Contents headed to the receiving office and materials designated for removal followed different paths within the same assignment.

PLAN | SEPARATE | DISCONNECT | MOVE | CLEAR | DOCUMENT

CONTENTS RELOCATION AND ORIGIN CLEARANCE MANAGED AS CONNECTED WORK.

+ THE OUTCOME

THE CONTENTS MOVED.
THE WORKPLACE CLEARED.

The Royal Drive workplace was cleared of designated office contents while the receiving-location move was coordinated with appliance and trade interfaces. Recorded steel recovery added a measurable outcome to the transition.

CLEARED

DEPARTING WORKPLACE

Designated office contents, furniture and demountable components were removed from Royal Drive.

RELOCATED

CONTENTS AND APPLIANCES

The receiving-location move included coordinated handling and associated appliance waterline work.

30,114 LB

RECORDED STEEL RECOVERY

Four recycling transactions documented steel shred mix after recorded nonmetal deductions.

WHAT THE PROJECT DELIVERED

ORIGIN AND DESTINATION CONNECTED

The move and departing-office clearance were coordinated within the same transition.

DEFINED TECHNICAL BOUNDARIES

Electrical disconnection and limited furniture-cabling removal supported dismantling within the agreed office-clearance scope.

MATERIAL RECOVERY DOCUMENTED

Steel separation and recycling produced a documented recovery quantity across four transactions.

FIELD SERVICES RECORDED

Signed work tickets and move records supported the documented execution.

ONE ACCOUNTABLE PARTNER.
CONNECTED FIELD EXECUTION.

DELIVERY RESULT

ASI brought moving, workplace dismantling, trade interfaces and material recovery together to complete a coordinated office transition.

THE WORK BEHIND THE CLEARANCE

Contents relocation, electrical disconnection, appliance coordination and material recovery connected the visible office clearance with the wider transition.
