A BABCOCK POWER INC. SUBSIDIARY

+ OFFICE AND TECHNICAL DECOMMISSION

CLEAR THE WORKPLACE. CONNECT THE CREWS. CONTROL THE EXIT.

ASI coordinated furniture clearance, technical-room removal and disposal logistics for Thermal Engineering International's Santa Fe Springs workplace exit.

CREW INTERFACES

OVERVIEW

CHALLENGE

The office exit combined furniture and workstation dismantling with technical-room clearance. Multiple crews and moving-company interfaces required coordinated responsibilities and debris logistics.

ASI APPROACH

ASI connected workplace removals, selective electrical and low-voltage responsibilities, technical equipment clearance and waste handling within the same site assignment.

RESULTS

- Office and conference areas cleared
- Technical-room equipment removed
- Crews and disposal logistics coordinated

TEi | SANTA FE SPRINGS

At the Slusher Drive workplace, ASI delivered the decommissioning scope alongside the wider relocation effort. Office clearance and technical-room removals were brought together through coordinated field execution.

DELIVERY
Coordinated removal

+ WORKPLACE CLEARANCE AND INTERFACES

FURNITURE. TECHNOLOGY. LOGISTICS.
ONE CONNECTED SITE ASSIGNMENT.

Furniture and workstation removals shared the workplace with technical decommissioning responsibilities. ASI coordinated the clearance scopes and hauling while working alongside the relocation teams.

DISPOSAL COORDINATION

COORDINATE WORKPLACE CLEARANCE

The assignment addressed office furniture, workstations and remaining contents. Clearance extended from open office areas to meeting spaces, with the existing building interior retained.

KEEP THE HANDOFFS CONNECTED

ASI coordinated with multiple crews and moving-company teams. Furniture dismantling, technical removals and bin exchanges formed connected responsibilities within the site exit.

+ FIELD EXECUTION

TECHNICAL DEPENDENCIES.
DEFINED REMOVAL RESPONSIBILITIES.

The technical room added cabling, equipment and support-system interfaces to the workplace clearance. The field views show existing infrastructure and the room after equipment removal.

TECHNICAL-ROOM INFRASTRUCTURE | BEFORE

TECHNICAL EQUIPMENT CLEARANCE | COMPLETED

TECHNICAL CLEARANCE, CONNECTED TO THE EXIT.

Technical-room equipment removal and selective electrical and low-voltage work were coordinated with the broader office decommission. The work connected specialist responsibilities with physical clearance and disposal.

+ THE OUTCOME

WORKPLACE CONTENTS CLEARED.
FIELD RESPONSIBILITIES CONNECTED.

ASI's assignment brought workplace clearance, technical-room removal and disposal logistics together within a multi-company relocation environment.

CLEARED

OFFICE AND MEETING AREAS

Furniture and workplace contents were removed from the office and conference areas.

REMOVED

TECHNICAL EQUIPMENT

Technical-room equipment clearance formed part of the same site assignment.

COORDINATED

CREWS AND DISPOSAL

Field responsibilities connected multiple crews, removal activity and bin exchanges.

WHAT THE PROJECT DELIVERED

WORKPLACE CLEARANCE

Open office and meeting areas were cleared while the existing interior remained.

TECHNICAL DEPENDENCIES

Equipment removal was coordinated with selective electrical and low-voltage responsibilities.

FIELD LOGISTICS

Waste handling and disposal services supported the removal work at the exact site.

ONE ACCOUNTABLE PARTNER

ASI coordinated its decommissioning scopes alongside the wider relocation teams.

ONE ACCOUNTABLE PARTNER.
WORKPLACE EXIT, COORDINATED FIELD DELIVERY.

DELIVERY RESULT

The Santa Fe Springs assignment demonstrates ASI's ability to connect workplace clearance, technical removals and field logistics alongside the wider relocation teams.
