+ PHASED WORKPLACE INSTALLATION

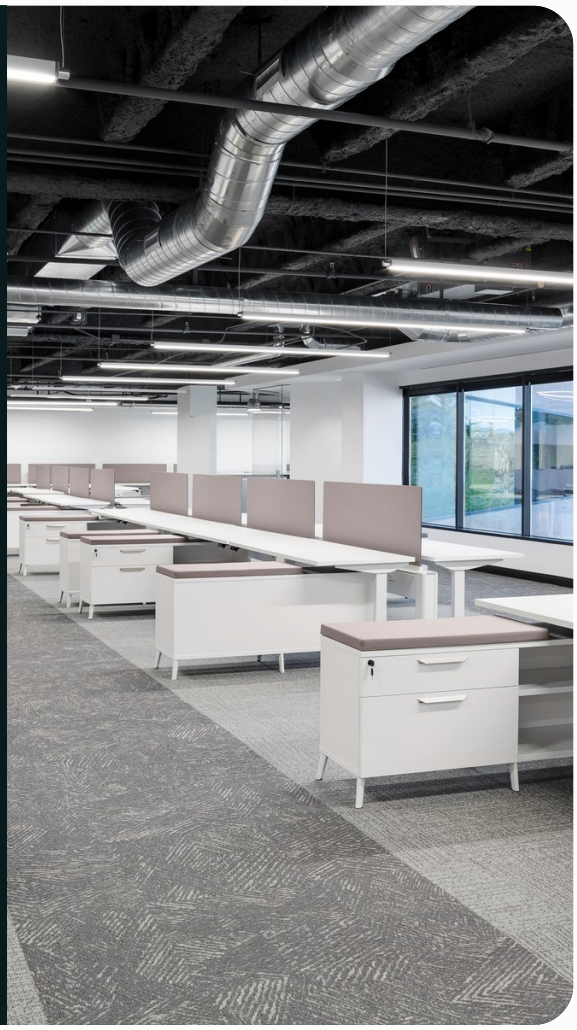

BUILD THE WORKPLACE. CONNECT THE EXPANSION. FOLLOW THROUGH.

ASI coordinated furniture delivery, installation and later expansion work for CIM Group's fourth-floor Phoenix workplace, connecting incoming shipments with field execution and targeted follow-up.

FIELD FOLLOW-THROUGH

OVERVIEW

CHALLENGE

The workplace required an initial furniture installation, a later expansion and follow-up work on individual components. Incoming shipments, handling equipment and installation crews had to be coordinated around the fourth-floor setting and the furniture layout, with the later expansion connecting to an existing workplace.

ASI APPROACH

ASI organized receiving, inspection and staging before installation, coordinated bench workstations, private-office furniture and meeting tables, and carried replacement items into targeted return visits.

RESULTS

- Bench workstations installed in the original workplace
- Expansion receiving and installation coordinated
- Targeted table installation signed off

CIM GROUP | PHOENIX

The assignment was more than a furniture shipment. ASI connected the original workplace installation with a later expansion, managing the practical sequence of receiving, staging, assembly and component follow-through at one Phoenix site.

+ PLAN THE WORKPLACE. SEQUENCE THE FIELD.

PLAN THE RECEIVING SEQUENCE.
CONNECT THE NEW WORK AREAS.

The expansion scope connected 45 Beam workstations, eight manager stations, three Swap tables and four conference tables. ASI organized receiving, staging and crew responsibilities around that fourth-floor layout.

A LAYOUT BECOMES A FIELD SEQUENCE

The expansion plan connected workstation rows, private offices and meeting areas. ASI coordinated incoming components, fourth-floor receiving and assembly while carrying later replacement items through targeted follow-up.

+ THE ASI DELIVERY MODEL

MULTIPLE FIELD PHASES.
ONE COORDINATED ASSIGNMENT.

ASI structured the field work around the furniture's path into the workplace, from receiving and inspection to assembly, then the separate visits needed for remaining components.

RECEIVE

PREPARE FOR INCOMING FURNITURE

Coordinate deliveries, handling equipment and crews so furniture can be unloaded, checked and moved into the fourth-floor work area.

STAGE

SET UP THE INSTALLATION SEQUENCE

Separate receiving and staging from assembly, with materials positioned to support the planned work areas and crew assignments.

INSTALL

BUILD THE WORKPLACE FURNITURE

Assemble bench workstations and private-office furniture, with meeting tables and supporting components coordinated as part of the wider assignment.

EXPAND

CONNECT THE NEXT PHASE

Carry the later expansion through its own field sequence while coordinating new furniture with the existing workstation environment.

FOLLOW

KEEP COMPONENT WORK CONNECTED

Track replacement and backordered items, arrange targeted return visits and capture the signed record for the defined table-installation work.

Receiving, assembly and follow-through

STATUS
PHASED DELIVERY

ONE TEAM CONNECTED THE FIELD INTERFACES

The main installation and later component work followed different field sequences. ASI maintained the link between shipments, site work and return visits so remaining items stayed attached to the original assignment.

PLAN | RECEIVE | STAGE | INSTALL | EXPAND | FOLLOW

DELIVERY, INSTALLATION AND FOLLOW-UP MANAGED AS CONNECTED RESPONSIBILITIES.

+ THE OUTCOME

WORKPLACE FURNITURE INSTALLED.
FOLLOW-THROUGH KEPT CONNECTED.

The original workplace received installed benching, followed by a separate expansion sequence and targeted furniture follow-up. ASI carried responsibility across those phases instead of treating delivery, installation and replacement items as disconnected tasks.

INSTALLED

ORIGINAL WORKPLACE

Bench workstations formed the original workplace environment before the later expansion activity.

PHASED

EXPANSION EXECUTION

Receiving, staging and assembly were coordinated through a dedicated field sequence for the expansion.

SIGNED

TARGETED TABLE WORK

The defined replacement-table and backordered-table installation carried its own signed field record.

WHAT THE PROJECT DELIVERED

ONE ACCOUNTABLE FIELD PARTNER

ASI connected supplier deliveries, onsite installation and later component work through a single coordinated assignment.

FURNITURE LOGISTICS TIED TO THE FLOOR

Receiving and staging supported the actual fourth-floor workstation and office installation sequence.

EXPANSION TREATED AS ITS OWN PHASE

New work areas received a dedicated installation plan that connected incoming furniture with the existing workplace.

FOLLOW-THROUGH BEYOND DELIVERY

Replacement and backordered furniture items remained part of the work through targeted installation visits.

ONE ACCOUNTABLE PARTNER.
RECEIVE. INSTALL. EXPAND. FOLLOW THROUGH.

DELIVERY RESULT

ASI connected furniture logistics, workplace installation, expansion and targeted return visits through one accountable field-delivery relationship.
