+ TARGETED IMPROVEMENTS. CONNECTED DELIVERY.

ACOUSTIC FINISHES. CONCEALED POWER. A CLEANER WORKPLACE.

ASI coordinated fitted acoustic wall panels and concealed display power across two rooms at McGriff's Birmingham office.

WALL PREPARATION. ACOUSTIC PANELS. DISPLAY POWER.

OVERVIEW

CHALLENGE

Two room improvements called for coordinated finish and electrical work: a damaged office wall needed a new acoustic surface, while visible display cords needed a concealed connection.

ASI APPROACH

ASI connected material selection and procurement with wall preparation, fitted panel installation and localized electrical work. Existing room finishes shaped each installation.

RESULTS

- Acoustic wall panels fitted in the office
- Display power concealed behind the screen
- Two focused scopes brought to completion

MCGRIFF | BIRMINGHAM

An office wall and a meeting-room display each needed a different solution. ASI managed the specialty finish and power work through one coordinated assignment, with attention to how the completed rooms looked and functioned.

Acoustics and power

DELIVERY
Through WeSolve

+ THE DISPLAY-POWER IMPROVEMENT

VISIBLE CORDS OUT.
THE CONNECTION MOVED BEHIND.

The meeting-room display had visible cords running down the wall. Localized electrical work moved the connection behind the screen while retaining the room's existing wall finish.

DISPLAY CONNECTION | BEFORE

CONCEALED DISPLAY POWER | COMPLETED

WORK BEHIND THE FINISH

The scope connected localized wall access with a power connection behind the installed display. Lower blank plates remain visible in the completed room.

A CLEANER PRESENTATION

The completed room shows the display in place with the hanging cord run removed. Existing paneling and surrounding furnishings remain.

+ THE ASI DELIVERY MODEL

FINISH WORK AND POWER.
COORDINATED IN PLACE.

The assignment connected a specialty material order with precise work in two existing rooms. ASI coordinated the selected finishes, installation and display-power improvements.

SELECT

MATCH THE ACOUSTIC FINISH

The specified Kirei Groovy 1.0 panels in Frost established the office wall's material, profile and color.

PREP

PREPARE THE EXISTING WALL

The office scope called for surface preparation before installation of 102 square feet of acoustic wall panels.

FIT

INSTALL THE PANEL SURFACE

Panels were fitted to the office wall, creating a consistent vertical finish around the existing room.

POWER

CONCEAL THE DISPLAY CONNECTION

Localized wall access allowed the power connection to be extended behind the meeting-room display, removing the exposed cord run.

FINISH

RESTORE THE ROOM PRESENTATION

The display has a concealed power connection and lower blank plates in place. The separate office wall carries the new acoustic finish.

STATUS
COMPLETED

ACOUSTIC FINISHES AND DISPLAY POWER

ASI connected specialty material procurement, surface preparation and fitted installation with the separate display-power scope. Each room received the work it needed within the existing workplace.

ONE ACCOUNTABLE PARTNER FOR COORDINATED WORKPLACE IMPROVEMENTS.

+ THE OFFICE WALL IMPROVEMENT

FROM A DAMAGED WALL
TO A FITTED ACOUSTIC FINISH.

The office received a separate finish treatment: 102 square feet of Kirei Groovy 1.0 acoustic panels in Frost. Surface preparation and panel fitting addressed the existing wall condition.
